Sliding Door Lock

The Zebratti sliding door lock has been developed as a low profile lock, for use with stacker and cavity sliding doors, in both timber and aluminium joinery.

The LCS Lock range requires a minimum of 37mm thick door section.

The twin locking prongs are driven by the snib inside the flush handle. The key is used finally to lock the prongs in place.

Handle fixings have been concelled for a clean minimal look.

Features

- Corrosion Resistant - made entirely from Aluminium and Stainless Steel
- Smooth Operation
- Twin Locking Prongs - anti lift

Specifications	Detail
